

Centralized, Federated, or Decentralized? Your Data Governance Best Tailored Fit Model

With APGAR's data governance model assessment, we guide organizations to better understand the governance challenges and identify the model that best fits their governance goals. Through structured assessments, stakeholder workshops, and concrete decision frameworks, we identify the optimal and most practical data governance model and precisely position your organization on the right scale

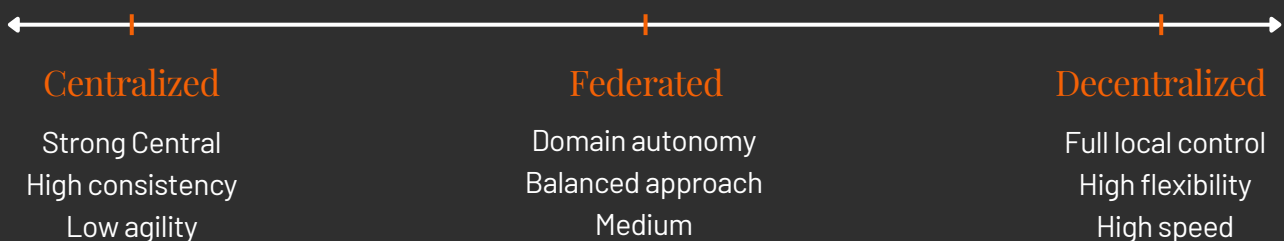

Organizations struggle with unclear ownership and decision rights, fragmented data silos with inconsistent rules, rising compliance and risk exposure, and “zombie” governance programs that exist on paper but do not work in practice, challenges that are only amplified as AI use and business growth accelerate

Fit-for-purpose governance model that empowers data teams, strengthens data oversight, reduces compliance risk, and unlocks more value from data and AI.

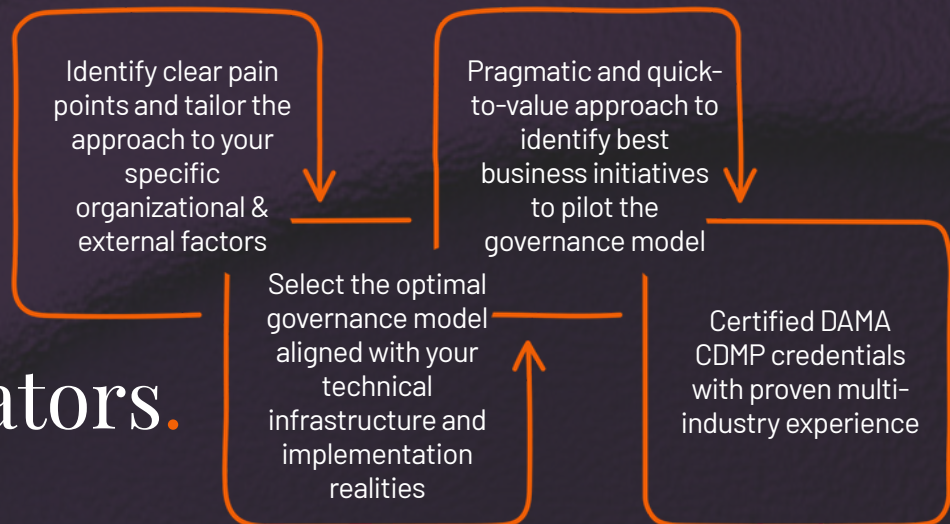

APGAR's Data Governance Vision

We help you determine your organization's position.

Our Key Differentiators.

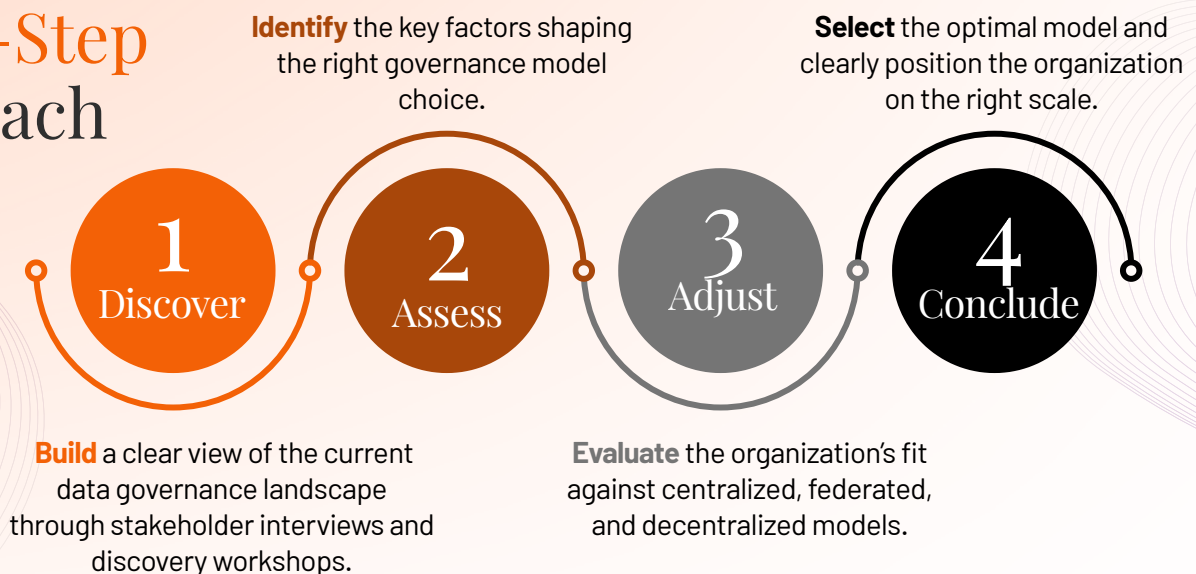

A fast-track way to choose the right governance model, resolve ownership confusion, reduce risk, and unlock trusted AI and data value.
